Basic human comfort is a foundation of responsible design, and an essential key to comfort is air quality. Polluted indoor air has the potential to cause a variety of health complaints.

On the opposite end of the spectrum, clean indoor air helps improve physical well-being and enhances productivity in the work environment.

For full details on GREENGUARD's certification program and to print SheerWeave GREENGUARD certificates, go to www.greenguard.org.

Phifer SheerWeave® combines the distinctive features of sun control protection and indoor air quality.

- GREENGUARD is an indoor air quality certification program for low-emitting products and materials.
- GREENGUARD evaluates over 75,000 chemicals, including volatile organic compounds, carcinogens and reproductive toxins.
- GREENGUARD tests on a quarterly basis to ensure continual compliance with their stringent standards.
- GREENGUARD certification is a requirement reference in the Leadership for Energy and Environmental Design (LEED™) for Commercial Interiors Rating System.
- GREENGUARD Children & Schools certification establishes extremely strict chemical emissions standards to accommodate the special needs of children in educational and daycare facilities.

PHIFER INCORPORATED is committed to extending environmental stewardship with our corporate goals throughout the world.

Phifer's commitment to the environment dates back to the company's origins when our founder, Ross Phifer, envisioned a manufacturing facility that would bring a better standard of living to its community, advance technology to its industry and innovative products to its customers. Today, Phifer is the world's leader in the manufacture and sales of energy saving fabrics for both the residential and commercial markets. Phifer has no less than 85 branded products that offer a broad range of options to reduce solar heat gain, preserve interior surfaces and materials, improve the quality of home and work environments and protect natural resources by conserving energy. Our growth can be attributed to our solution-oriented approach as we partner with individual businesses, the architectural and design communities and governmental agencies to achieve their own goals of energy conservation and environmental preservation.

As a manufacturer, Phifer is committed to minimizing the impact on the environment from our manufacturing processes and finished products. Through specialized environmental objectives, policies and procedures, we ensure compliance with all [local, state and federal] regulatory requirements and surpass these requirements in many areas of waste management, employee awareness training and pollution prevention programs based on the measurement of our environmental performance.

The Alabama Department of Environmental Management has nominated Phifer for the Governor's Conservation Achievement Award, and the Alabama Wildlife Federation selects Phifer as the Air Conservationist of the Year. Phifer was the first manufacturer in our industry to achieve GREENGUARD certification. This rigorous evaluation of our interior shading fabrics is completely voluntary and assures that the highest industry standards are being applied to maintain indoor air quality for the health and safety of building occupants.

At Phifer, environmental responsibility is part of our corporate culture. We are leaders. We are proactive. We do it because it is the right thing to do.
